

# Infant Care Schedule Table

The Realityworks RealCare® Parenting Program features infant care simulations that can be customized for each participant.

Fifteen different infant care schedules – classified into Easy, Medium and Hard – are available to choose from. A variety of schedules can be selected for the course of a simulation, and these schedules can be manually chosen or randomly assigned using Control Center software or the optional handheld control unit. Schedules are based on the care required by 15 real infants over a period of 24 hours as shown below.

The blocks of color indicate the amount of time during the hour that the simulator will need care. This allows the instructor to choose the most appropriate schedule for each participant.
